

There are two math terms that you need to learn now in order to become a true Math Magician! The first is **more than**, also known as **greater than**, which means that something has *more* units than something else. Here's an example: The number 9 is *greater than* the number 6.

Circle the group that is *greater than* the other group:

The second term you should understand is **less than**. *Less than* means that something does not have as many units as something else. For example, the number 7 is *less than* the number 10.

Circle the group that is *less than* the other group:
