

Counting with Mia the Math Magician

Help me count the objects while you read the story. Ask your mom, dad or teacher to help if you need it.

Once upon a time there was a little boy and a little girl who went to the park. They saw many things and were so excited that they decided to count everything they saw.

First, they saw some dogs. Help them count the dogs that they saw: . Write down how many dogs you counted: _____.

They kept walking and then they saw some sheep grazing on a nearby pasture:

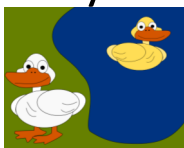

How many sheep did you count? _____

The boy and girl kept walking and they saw triplets:

. How many girls did they see? _____

All of a sudden they saw a small pond. There were some ducks in the pond:

. How many ducks do you see in the pond? _____

They realized that it was getting dark and it was time to get home. They had lots of homework to do... they had to practice counting. They smiled at each other and realized that they had already practiced their counting at the park!

The End

You did very well! You are on your way to becoming a Math Magician just like me! Try a few more counting problems before we move onto the next fun math topic! This time, try counting the things that you see, then write your answers in your workbook.

Count the pictures and write how many you see on the line.
