Valentine's Day Journal

Yvonne Crawford

A Math Journal is a great way to promote your child's abilities to learn and grow through words, numbers and even drawing. You can cut out the prompts and paste them into your child's math journal or you can simply use this booklet as a math journal.

Some prompts may only require a simple answer, while others will require more thinking and writing. Either way, encourage your child to write and draw out his or her thought processes.

Visit my site at www.mixminder.com for free worksheets and curriculum.

Happy Valentine's Day!

Use the table to calculate how many different types of hearts there are. Then, use the chart to make a graph of your findings.

Type	Number of hearts
	
	
	

Heart Graph

15 children each made 3 Valentine's day cards. How many cards did they make together? Draw some pictures to help figure out the answer.

A large, empty rectangular area for drawing, bounded by a red border.

One of your friends gives you 10 chocolate kisses. Another friend of yours gives you 5 chocolate kisses. You decide to give your teacher 3 of them. How many do you have left? Write out a number sentence for this problem and draw pictures to show your work.

Look at the numbers on the hearts. Write out the numbers in words in your math journal.

Look at the numbers on the balloons. Order the numbers from greatest to least in your math journal.
